I am a SMTP email client that is written in python. You can
use me to send email to anyone. You can easily find me online.

Challenge: Write an SMTP email client using python. Send an email with that script to me
ytbryan@gmail.com

Details:
1. You can reuse your email server's SMTP settings in your gmail.

2. Using your email client, send an email to ytbryan@gmail.com and say hi.

3. Show off a special feature that your python email client can do.

4. Bonus: Issue prompt questions and ask user to enter email, subject and content to send
to.

****
IMPORTANT: You must remove your your username and password before sharing. Do not share your
credential publicly.
